

Farm machinery used for planting

Seed drill

This is a device for placing the seeds at a uniform rate and at a controlled depth with or without the arrangement to cover them with soil in a continuous flow in furrows.

This ensures even distribution of seeds. At the exact seeding rate and depth, the seed drill sows the seeds, ensuring that the seeds are covered by soil. This saves them from being eaten or dried up by animals as a result of sun exposure.

Broadcast seeder

A broadcast seeder or spreader or fertilizer spreader is a commonly used crop, lime or fertilizer spreading tractor tool.

Seed cum fertilizer drill

Seed drills are equipped with an attachment to drop fertilizer; spread the fertilizer on the field evenly. It's called a fertilizer drill seed material. Such a drill has a wide seed box that is lengthwise divided into two compartments, one for seed and one for fertilizers. Seed drill may be graded as (i) Drawn Bullock (ii) Drawn Tractor.
