The maximum temperature this week will be 34.0°C and the minimum temperature will be 26.0°C. The atmospheric humidity will be between 74% and 91%. Westerly wind speed is likely to reach 2-4 km/h.

## C. Agro meteorological Advisories

Crop	Stage	Agro meteorological Advisories
General recommendations		As continuous rain ceases the high humidity along with high temperature may trigger the incidence of fungal diseases
Coconut	Growth stage	To control bud rot in coconut small-perforated sachets containing 2g of Mancozeb may be tied to the top of leaf axil. When it rains a small quantity of fungicide is released from the sachets to the leaf base, thus protecting the palm.
Banana	Vegetative	To control sigatoka leafspot disease in banana cut and remove all severely affected leaves and spray propiconazol 1ml/ liter of water
cowpea	Growth stage	To control anthracnose disease in cowpea treat seeds with Bavistin 2g/kg seed.
Brinjal	Growth stage	As a prophylactic measure against damping off in brinjal, spray Pseudomonas 20 g in one litre of water on the leaves and in soil on weekly basis.
Pepper	Growth stage	Spraying 1% Bordeaux mixture or copper oxy chloride 3 g/L before the onset of monsoon will help reduce the disease occurrence.
